

Why omlox?

omlox unifies all location data in order to bridge the gap of missing interoperability, eliminating vendor lock-in for customers. As a widely-recognized and utilized standard, omlox facilitates true vendor independence, comprehensive interoperability, and simple integration of technologies and systems across location and company boundaries.

Integrate location data like never before

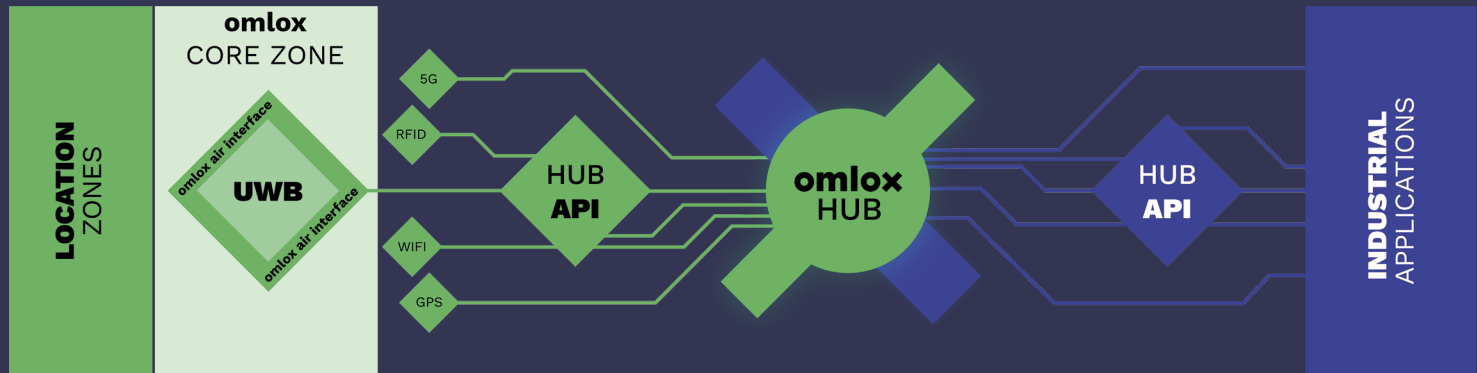

The open locating standard

What is omlox?

omlox is an open and interoperable standard that is revolutionizing real-time locating. omlox, the world's first open locating standard, unifies location data from all positioning technologies and enables vendor-independent locating of trackables without boundaries. It leverages all locating technologies, including UWB, RFID, Wi-Fi, GPS, BLE and 5G, making Industry 4.0 and smart factories a reality.

The omlox Ecosystem

The foundation of omlox is built upon an ecosystem of partners growing at a rapid pace. The member companies span a variety of backgrounds - ranging from software and hardware companies, system integrators, and solution providers. They all have one common goal: to utilize, promote, and develop the omlox standard in order to streamline the use of location data and enable new use cases.

omlox is an open and collaborative ecosystem, managed by **PROFIBUS & PROFINET** International.

- ◆ Over 80 omlox partners and counting
- ◆ Global association for industrial standardization
- ◆ Over 30 years in the market
- ◆ Over 1.500 members and 27 associations
- ◆ Fostering neutrality and collaboration
- ◆ use of location data and enable new use cases.
